--> Comment Text :
Nuclear waste should be stored where it is made and used. Why risk potential of a nuclear disaster when these dangerous materials have to be transported. Can you guarantee the safety of the transport of these dangerous, hazardous materials over thousands of miles? Especially now, in lieu of the recent events, is the possibility of terrorism a potential lethal risk during transportation? Nevada does not have a nuclear power plant. Store it where it is made. You also have no way of proving the site safe for 10,000 years. The site is in a high risk seismic zone. Nevada is structured on tourism and this site is also a danger to our primary industry. I was born and raised here in Las Vegas, Nevada. I have a family and I would be scared to stay here if the dump is approved. It would make me want to move to another safer place.
